Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from History of the Inductive Sciences, Vol. 1 I have, however, in Notes at the end of each Book, given an account Of some of the most impor tant recent advances in each subject, considered as an Inductive Science. I introduce this limitation, because it is my justification, as well in the present as in the former edition, for the omission of many topics which are of great interest, both in a prac tical and in a scientific view, but which are applica tions of discoveries already made, not steps towards discovery - deductive results of laws of nature, not inductions of such laws from observation. This was my reason for passing over such inventions as printing and porcelain, glass and gunpowder, steam boats and rail-roads, gas-lighting and chemical bleaching, in the former edition; this is my excuse for saying nothing now of photography, the electric telegraph, and other striking recent inventions. I have omitted, for like reasons, many remarkable inventions, still more directly bearing upon the progress of science, as Daniel s galvanic battery, and the very ingenious battery Of Mr. Grove. Even implements of scientific research, if we are not able to bring into view the points to which they lead. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy.
